**II. DISCUSSION**

**A. U.S. Patent No. 4,652,748**

The '748 patent was designated as an A-type and a D-type reference in a search report rendered for corresponding European patent application no. 98 11 3081. An A-type reference provides technical background information and is not pertinent to patentability.

The '752 patent was designated as an A-type reference in a search report rendered for

corresponding European patent application no. 98 11 3081.

**C. West German Reference No. 23 54 902**

Based solely on the drawings and the attached English-language Abstract, the '902 reference is pertinent because it appears to disclose a clamp ring with a central hole having four spiral cam surfaces.

The '902 reference was designated as an A-type reference in a search report rendered for corresponding European patent application no. 98 11 3081.

**D. West German Reference No. 24 48 239**

Based solely on the drawings and the attached English-language Abstract, the '239 reference is pertinent because it appears to disclose a transducer that includes an optical disc that is coupled to a shaft via a spring.

**III. CONCLUSION**

It is believed that none of the above references, alone or in combination, disclose or suggest the invention claimed. Applicants wish it to be known that the recitation of the above-mentioned references should not be deemed an admission that any of the references qualifies as prior art. It is Applicants' desire, however, to have these references available in the record for

both the Examiner and the public to see. Applicants therefore request that the Examiner review the entire disclosure of the above-mentioned references and make them of record.

Respectfully submitted,
